Telling a story about gas prices

How should we measure “gas prices”? Record the measures your group discussed, along with a strength and weakness of each.

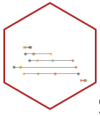

Measure	Strength	Weakness

Opening: Americans are concerned about current prices at the pump.

Challenge: How have gas prices changed over time? Is this anxiety warranted?

Action: What does the data show? How does it answer the challenge?

Resolution: What should the audience take away?

Sketch two sequential charts that support your story. Write the title you would use for each chart.
